

How To Install Your New Mini Sites

Introduction

Hi. Thank you for downloading these FREE Mini Site templates. Remember to first read the license agreement (also included in the package).

The mini sites are all HTML templates and they are rather simple and self explanatory. Just use them as you would any other website templates. This is what you have to do step-by-step:

Step 1

Unzip the different ZIP-files to your PC.

Step 2

Add your content by changing the content using for instance Frontpage. If you do not have that you can even use Notepad. You can either change the text in there or do a "find and replace". By viewing the result in your Browser by clicking on that page, you will see if it looks ok.

You do the same thing with the links in the page. You just insert links to other pages, to any other site you might have or with an affiliate link to a product you want to sell.

Step 3

Add your content by changing the content using for instance Frontpage. If you do not have that you can even use Notepad. You can either change the text in there or do a "find and replace". By viewing the result in your Browser by clicking on that page, you will see if it looks ok.

If you want to make a confirmation page, a thank-you page or even a ONE-TIME-OFFER page, you just copy the index.html, save under a different name and continue there.

Step 4

Upload the pages and the images to your domain.

The result should look like the pages that you can see when you click on the first page of www.minisitesecrets4newbies.com.

Kind regards,

Tony de Bree
